Page 1: The document was opened only to be read, not to be changed.
Page 1: Every paragraph in this sample is plain English so the translation
Page 1: layer has something predictable to work with. The reader should
Page 1: merge lines into paragraphs conservatively, and it should never
Page 1: join two columns into one sentence.
Page 1: A second paragraph begins here. It exists to test paragraph
Page 1: detection: lines are close together, the gap between paragraphs
Page 1: is larger, and there is no indentation on the first line.
Page 1: Footnotes and page numbers are the usual sources of noise in
Page 1: PDF text extraction. This sample has a page number at the bottom.
Ethical principles are discussed in the middle of page 1.
Section 1: The document was opened only to be read, not to be changed.
Section 1: Every paragraph in this sample is plain English so the translation
Section 1: layer has something predictable to work with. The reader should
Section 1: merge lines into paragraphs conservatively, and it should never
Section 1: join two columns into one sentence.
Section 1: A second paragraph begins here. It exists to test paragraph
Section 1: detection: lines are close together, the gap between paragraphs
Section 1: is larger, and there is no indentation on the first line.
Section 1: Footnotes and page numbers are the usual sources of noise in
Section 1: PDF text extraction. This sample has a page number at the bottom.

Page 2: The document was opened only to be read, not to be changed.
Page 2: Every paragraph in this sample is plain English so the translation
Page 2: layer has something predictable to work with. The reader should
Page 2: merge lines into paragraphs conservatively, and it should never
Page 2: join two columns into one sentence.
Page 2: A second paragraph begins here. It exists to test paragraph
Page 2: detection: lines are close together, the gap between paragraphs
Page 2: is larger, and there is no indentation on the first line.
Page 2: Footnotes and page numbers are the usual sources of noise in
Page 2: PDF text extraction. This sample has a page number at the bottom.
Ethical principles are discussed in the middle of page 2.
Section 2: The document was opened only to be read, not to be changed.
Section 2: Every paragraph in this sample is plain English so the translation
Section 2: layer has something predictable to work with. The reader should
Section 2: merge lines into paragraphs conservatively, and it should never
Section 2: join two columns into one sentence.
Section 2: A second paragraph begins here. It exists to test paragraph
Section 2: detection: lines are close together, the gap between paragraphs
Section 2: is larger, and there is no indentation on the first line.
Section 2: Footnotes and page numbers are the usual sources of noise in
Section 2: PDF text extraction. This sample has a page number at the bottom.

Page 3: The document was opened only to be read, not to be changed.
Page 3: Every paragraph in this sample is plain English so the translation
Page 3: layer has something predictable to work with. The reader should
Page 3: merge lines into paragraphs conservatively, and it should never
Page 3: join two columns into one sentence.
Page 3: A second paragraph begins here. It exists to test paragraph
Page 3: detection: lines are close together, the gap between paragraphs
Page 3: is larger, and there is no indentation on the first line.
Page 3: Footnotes and page numbers are the usual sources of noise in
Page 3: PDF text extraction. This sample has a page number at the bottom.
Ethical principles are discussed in the middle of page 3.
Section 3: The document was opened only to be read, not to be changed.
Section 3: Every paragraph in this sample is plain English so the translation
Section 3: layer has something predictable to work with. The reader should
Section 3: merge lines into paragraphs conservatively, and it should never
Section 3: join two columns into one sentence.
Section 3: A second paragraph begins here. It exists to test paragraph
Section 3: detection: lines are close together, the gap between paragraphs
Section 3: is larger, and there is no indentation on the first line.
Section 3: Footnotes and page numbers are the usual sources of noise in
Section 3: PDF text extraction. This sample has a page number at the bottom.

Page 4: The document was opened only to be read, not to be changed.
Page 4: Every paragraph in this sample is plain English so the translation
Page 4: layer has something predictable to work with. The reader should
Page 4: merge lines into paragraphs conservatively, and it should never
Page 4: join two columns into one sentence.
Page 4: A second paragraph begins here. It exists to test paragraph
Page 4: detection: lines are close together, the gap between paragraphs
Page 4: is larger, and there is no indentation on the first line.
Page 4: Footnotes and page numbers are the usual sources of noise in
Page 4: PDF text extraction. This sample has a page number at the bottom.
Ethical principles are discussed in the middle of page 4.
Section 4: The document was opened only to be read, not to be changed.
Section 4: Every paragraph in this sample is plain English so the translation
Section 4: layer has something predictable to work with. The reader should
Section 4: merge lines into paragraphs conservatively, and it should never
Section 4: join two columns into one sentence.
Section 4: A second paragraph begins here. It exists to test paragraph
Section 4: detection: lines are close together, the gap between paragraphs
Section 4: is larger, and there is no indentation on the first line.
Section 4: Footnotes and page numbers are the usual sources of noise in
Section 4: PDF text extraction. This sample has a page number at the bottom.

Page 5: The document was opened only to be read, not to be changed.
Page 5: Every paragraph in this sample is plain English so the translation
Page 5: layer has something predictable to work with. The reader should
Page 5: merge lines into paragraphs conservatively, and it should never
Page 5: join two columns into one sentence.
Page 5: A second paragraph begins here. It exists to test paragraph
Page 5: detection: lines are close together, the gap between paragraphs
Page 5: is larger, and there is no indentation on the first line.
Page 5: Footnotes and page numbers are the usual sources of noise in
Page 5: PDF text extraction. This sample has a page number at the bottom.
Ethical principles are discussed in the middle of page 5.
Section 5: The document was opened only to be read, not to be changed.
Section 5: Every paragraph in this sample is plain English so the translation
Section 5: layer has something predictable to work with. The reader should
Section 5: merge lines into paragraphs conservatively, and it should never
Section 5: join two columns into one sentence.
Section 5: A second paragraph begins here. It exists to test paragraph
Section 5: detection: lines are close together, the gap between paragraphs
Section 5: is larger, and there is no indentation on the first line.
Section 5: Footnotes and page numbers are the usual sources of noise in
Section 5: PDF text extraction. This sample has a page number at the bottom.

Page 6: The document was opened only to be read, not to be changed.
Page 6: Every paragraph in this sample is plain English so the translation
Page 6: layer has something predictable to work with. The reader should
Page 6: merge lines into paragraphs conservatively, and it should never
Page 6: join two columns into one sentence.
Page 6: A second paragraph begins here. It exists to test paragraph
Page 6: detection: lines are close together, the gap between paragraphs
Page 6: is larger, and there is no indentation on the first line.
Page 6: Footnotes and page numbers are the usual sources of noise in
Page 6: PDF text extraction. This sample has a page number at the bottom.
Ethical principles are discussed in the middle of page 6.
Section 6: The document was opened only to be read, not to be changed.
Section 6: Every paragraph in this sample is plain English so the translation
Section 6: layer has something predictable to work with. The reader should
Section 6: merge lines into paragraphs conservatively, and it should never
Section 6: join two columns into one sentence.
Section 6: A second paragraph begins here. It exists to test paragraph
Section 6: detection: lines are close together, the gap between paragraphs
Section 6: is larger, and there is no indentation on the first line.
Section 6: Footnotes and page numbers are the usual sources of noise in
Section 6: PDF text extraction. This sample has a page number at the bottom.

Page 7: The document was opened only to be read, not to be changed.
Page 7: Every paragraph in this sample is plain English so the translation
Page 7: layer has something predictable to work with. The reader should
Page 7: merge lines into paragraphs conservatively, and it should never
Page 7: join two columns into one sentence.
Page 7: A second paragraph begins here. It exists to test paragraph
Page 7: detection: lines are close together, the gap between paragraphs
Page 7: is larger, and there is no indentation on the first line.
Page 7: Footnotes and page numbers are the usual sources of noise in
Page 7: PDF text extraction. This sample has a page number at the bottom.
Ethical principles are discussed in the middle of page 7.
Section 7: The document was opened only to be read, not to be changed.
Section 7: Every paragraph in this sample is plain English so the translation
Section 7: layer has something predictable to work with. The reader should
Section 7: merge lines into paragraphs conservatively, and it should never
Section 7: join two columns into one sentence.
Section 7: A second paragraph begins here. It exists to test paragraph
Section 7: detection: lines are close together, the gap between paragraphs
Section 7: is larger, and there is no indentation on the first line.
Section 7: Footnotes and page numbers are the usual sources of noise in
Section 7: PDF text extraction. This sample has a page number at the bottom.

Page 8: The document was opened only to be read, not to be changed.
Page 8: Every paragraph in this sample is plain English so the translation
Page 8: layer has something predictable to work with. The reader should
Page 8: merge lines into paragraphs conservatively, and it should never
Page 8: join two columns into one sentence.
Page 8: A second paragraph begins here. It exists to test paragraph
Page 8: detection: lines are close together, the gap between paragraphs
Page 8: is larger, and there is no indentation on the first line.
Page 8: Footnotes and page numbers are the usual sources of noise in
Page 8: PDF text extraction. This sample has a page number at the bottom.
Ethical principles are discussed in the middle of page 8.
Section 8: The document was opened only to be read, not to be changed.
Section 8: Every paragraph in this sample is plain English so the translation
Section 8: layer has something predictable to work with. The reader should
Section 8: merge lines into paragraphs conservatively, and it should never
Section 8: join two columns into one sentence.
Section 8: A second paragraph begins here. It exists to test paragraph
Section 8: detection: lines are close together, the gap between paragraphs
Section 8: is larger, and there is no indentation on the first line.
Section 8: Footnotes and page numbers are the usual sources of noise in
Section 8: PDF text extraction. This sample has a page number at the bottom.
